

Task 4: Motivation and Ownership

1. Why do you want to join Expert Thermal / XThermal?

My answer: Being true, semiconductors, chips and processors always seemed interesting topic to work on. Using my AI skills it would be worth experiencing what and how much I could create things related to this technology and domain.

I was once fascinated about Nvidia chips and the C++ and CUDA language. How tiny things could be so powerful.

One of my wishlist (inspired by my friend) is to visit a datacenter once in life.

As per your company information I could collect it seems you provide solutions and integrations related to thermal design for electronic, data and AI infrastructure.

Excited to work on this.

What are you most interested in building in AI/ML?

Well my most focus and interests in AI/ML is integrating the AI and ML solutions with new or existing product. It's like embedding those AI solutions for specific use cases.

Like for example in my current open source Analytical engine (Bjorn-engine) I am integrating NLP into duckDB (database management system) so that user could manually speak (ASR) and then the engine could automatically query the SQL and draw insights and analytics without too much human intervention.

NLP and Audio are 2 things I have been working on personally as well as in my Previous Internship.

3. Are you more interested in ML models, GenAI workflows, physics-aware AI, or product AI integration?

I am more interested in GenAI Workflows, and product AI integration.

I am willing and excited to work on physics aware AI as there's always should be a window for exploration and learning.

4. How do you handle ambiguous problems where requirements are not fully defined?

The first thing would be to understand and clarify the end goals with seniors or leaders

Asking questions may help.

We could also create educated assumptions but it is very important to get them verified by leaders or seniors.

5. Are you comfortable working in a fast-moving startup environment?

Yes , In fact in my previous organization we were told at the starting itself that we must be catching pace while making sure nothing lefts behind. I have worked on multiple technologies at same time as well as the project deadline was near.

6.How do you think you can grow within our team?

Their would be lots of experienced people and Seniors who possess lots of expertise and knowledge about topics . Interacting with them , collaborating with them and understanding how they approach a problem and communicate would be really helpful in my career ahead.

Taking insights from them , asking seniors , colleagues and proving ownership and taking responsibilities shall be critical and rewarding and would definitely help me grow within the team.

7.This role calls for ownership, commitment, and initiative. How would you bring new ideas, create solutions, and take on greater responsibility over time?

Ownership , from my definitions, relates to the feeling of treating a product like my own . We all do best and want best for ourselves. For the new ideas , I do have understanding of principles (Like Design thinking, software development cycle , Agile methodology etc.) Making something small , testing it , if works then produce on larger scale.

IDEAS are always found by asking questions to yourselves , others , exploring . researching etc. Being good at exploration already makes a person good at thoughts and creativity.
